Power supply upstream: mains in, inrush NTC on L, mains out to the 24 V supply

J1 and J2: pin 1 = L, pin 3 = N. Pin 2 is not connected: it drops into a non-plated slot between L and N on the PCB.
RT1 limits the inrush current of the 24 V supply input capacitors (81 uF): 325 V / 10 ohm = 33 A peak. The supply has its own T2A fuse.
H1 and H2: M3 holes between L and N, for nylon screws only.

Mains in, inrush NTC, mains out to the 24 V supply
